

Senior Full Stack Developer

RaySecur is looking for a seasoned Full Stack Developer to play a key role on our team developing the next generation of software for our revolutionary mm-wave technology MailSecur device and SaaS offering. This is a unique opportunity to join an early stage company with proven technology solving a real-world problem that already has an impressive list of initial customers.

You will have full ownership of the product road map, product design and architecture, all initial code development and the formation of a world-class software development team.

Responsibilities

- Design overall architecture of both the front-end, and back-end applications;
- Work with management team to create product road-map;
- Hands-on coding of initial applications;
- Create documentation of code base and APIs;
- Follow best practices for high availability, scalability and reliability;
- Maintain code quality, integrity and organization;
- Work with graphic designers to implement app design and layout;
- Recruit and train engineering team.

Experience Requirements

- We are looking for someone with 5 to 10 years of relevant experience;
- Expert in one or more of the following programming languages, e.g.: PHP, Python, Ruby, Java, JavaScript, Node.js etc;
- Development experience of both front and back-end systems;
- Highly experienced using advanced JavaScript libraries and frameworks such as NW.js, AngularJS, ReactJS, Electron;
- Solid experience with Linux environments and AWS services;
- Familiarity with Atlassian stack for documentation, task management, source and build management;
- Working knowledge of code versioning tools such as Git, Bitbucket;
- Understanding and implementation of security and data protection;
- B.S. in Computer Science or a related field.

Location

Cambridge, MA or Sherbrooke, QC
